

**ABSTRACT OF THE DISCLOSURE**

A method for producing open-knit fabric consisting in producing in succession rows of knitting with needles, with openwork being performed  
5 which is constituted by holes, each of which is provided by a group of needles in which a first needle, after taking part in the formation of a first row of knitting, is freed from the loop of the first row of knitting by transferring the loop to a second needle that is contiguous to the first needle. The first needle is actuated so as to resume knitting, forming a new loop of  
10 a row of knitting that is subsequent to the first row.
